## **PUBLIC NOTICE**

### **Attention Frankford Residents and Property Owners**

#### **FLUORIDE TO BE ADDED TO WATER SUPPLY**

In accordance with the standards of the Delaware Division of Public Health and the Federal Safe Drinking Water Act (SDWA) requirements, the Town of Frankford Public Water System will begin adding fluoride to its public water systems on or after August 15, 2011.

The Town of Frankford Public Water System will maintain a fluoride level of approximately 0.8 mg/l. The optimal fluoride concentration level is 0.8 – 1.2 milligrams per liter (mg/l) as recommended by the U.S. Public Health Service (USPHS) for dental disease prevention. The Town of Frankford Public Water System's daily sampling and inspection for quality control assures the consistency of this concentration.

If you or anyone in you family is currently taking fluoride supplements, consult you physician or dentist for guidance.

For more information, *please call our office at 302-732-9424 if you have any questions.*
